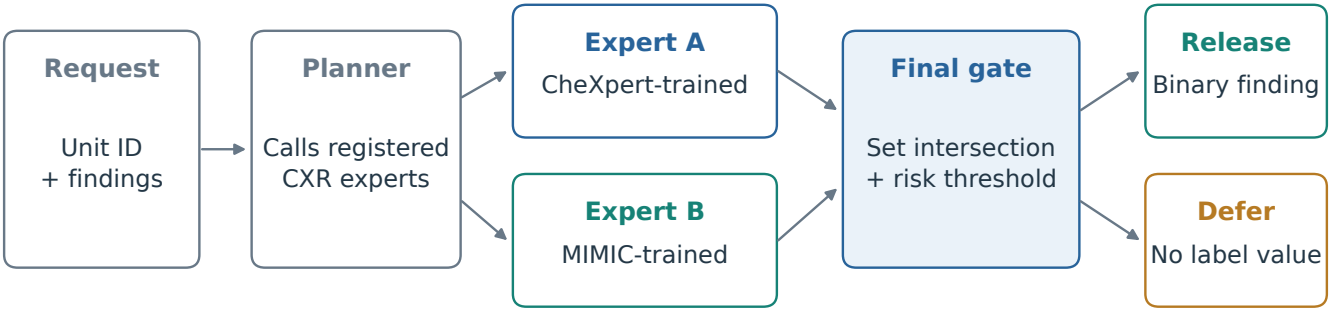
a Executed output boundary



Same unit and finding; distinct expert identities

b Original disjoint data partitions

Conformal calibration
NIH 846 | IU 1,182
Class-conditional sets; alpha = 0.10

Risk calibration
NIH 634 | IU 886
Exact bounds over 308 candidate rules

Original test
NIH 636 | IU 887
Release, errors and positive recall

c New patient replication; all fitted components frozen

2,244 new-shard images
1,966 unique patient IDs

→

384 overlapping patients excluded
1,582 new patients; one hash-selected image each

Certificate scope: independent units, fixed pipeline, common distribution and specified annotation target.
